

MBR-400 Cloning

Date: June 1, 2023

Cloning refers to taking the programming information from one radio and copying it to one or more radios without the aid of a computer. MBR-400 radios can do Wireless Cloning to one or multiple (unlimited) radios at the same time.

How to clone MBR-400

1. Place the devices to clone close by and decide which device will be the "source" radio (pick only 1 source radio). Then, an unlimited number of devices can be "target" radios.
2. While pressing the "Volume/Channel UP key" of the source radio and turn the POWER key on.
3. While pressing the "Volume/Channel DOWN key" of the target radio and turn the POWER key on.

When cloning is completed:

The source radio will state "completed" on the display, and the target radio(s) will power cycle off and on.
