Technical Service Bulletin

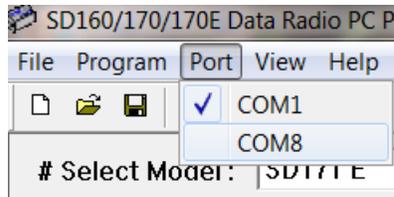

Date: June 4, 2014

Subject: SD-170E Programming Steps

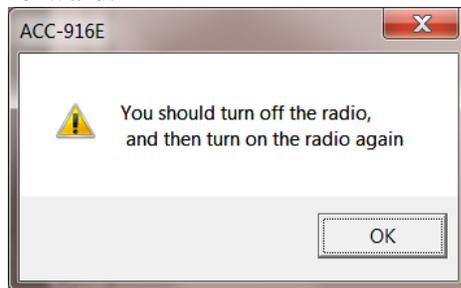

Issue: Intermittent programming of the SD-170E series radio when using the ACC-2016E. Method of programming corrects this issue.

Instructions:

1. Plug the ACC-2016E into the computer. If the driver has not been installed, follow the Windows Installation Wizard to install it. The driver will be on the ACC-916E CD or if the computer is connected to the internet, it can be installed directly from the FTDI site.
2. Run the ACC-916E programmer.
3. Open the Port drop down menu and select the port that is **not** assigned to the USB port. In this example COM1 is a serial port while COM8 is the ACC-2016E.

4. Click on the Read/Write  button. When the following is displayed, plug the SD-170E into the cable. Do not unplug the radio from this point forward.

5. The radio should now be in program mode. Click on the OK button then Close the Communication/EEPROM MAP window.

6. Next change the port number to the ACC-2016E. In this case it is COM8.

7. Click on the Read/Write  button then click OK. When the Communication/EEPROM MAP window is displayed, you can now read or write to the radio.
