## 1. INTRODUCTION

HL -1511 Series is a micro size FM transceiver operating between 136 ~ 174 MHz With the output power of 5 Watts , the radio is capable of communicating up 7 miles.

Like other Headline Systems quality products, HL-1511 Series carries a 24 months limited warranty. Please call our technical or customer service representatives at 913-859-9515 when you need help or visit us on the Web [www.tecnetusa.com](http://www.tecnetusa.com).

## 2. DESCRIPTION OF UNIT

### A. Power on / off and Volume Control Switch

Turn the transceiver on by rotating power on / off and volume control switch clockwise and control the volume.

B. Channel Select Button

Select the desired channel with pressing Up and Down button, pressing and holding down more than 1 second makes the channel moving fast. And you can choose, On or Off in function mode.

C. Speaker .

D. Whip Antenna. ( $\lambda/4$ )

E. Tx / Rx Indicate LED (3 colors)

Red	On	Transmitting
	Blinking	Low battery
Green	On	Receiving, monitoring
	Blinking	Different sub-tone when receiving
Orange	On	Power on

F. External Earphone/MIC and Programming Jack Socket

G. PTT(Push To Talk) Button

Hold down to transmit, release to receive.

H. Function Button

Refer to “OPERATION” page 7.

I. Monitor Button

Press to monitor. Holding down over 2 seconds keeps monitoring function on, and press shortly again or PTT Button to stop.

J. Battery Pack

### 3. THEORY OF OPERATION

#### ***INTRODUCTION***

HL-1511 Series is a micro size 99 channel portable FM transceiver constructed with a microprocessor controlled, temperature compensated Phase Locked Loop (PLL) frequency synthesizer. The radio features a double conversion receiver and a direct FM transmitter modulator. A special integrated circuit provides support to sub-audible signaling (CTCSS & DCS), 2 Tone and most of the receiving parts are switched off periodically in the power save mode to reduce battery current drain during standby.

The Block Diagram RF and Control Circuit Diagrams for HL-1511 Series shall be used in associate with the following circuit description.

#### ***CIRCUIT DESCRIPTIONS***

##### **1) PHASE-LOCK LOOP (PLL) CIRCUIT**

###### **\* Reference OSC(VCTCXO)**

The reference oscillator consists of X401 with a frequency of 14.4MHz. The reference oscillator frequency is stabilized by the Temperature and drives a divider to produce a comparison frequency.

This comparison frequency is selected by decoding the first three bits of the data input from microcomputer.

###### **\* Programmable divider**

The programmable divider in IC401 consists of a two-modulus prescaler with a 7 bit control register followed by an 11-bit internal programmable divider. The overall division ratio is selected by a single 19-bit word located on the serial data bus.

#### \* Phase Comparator

A digital-type phase comparator in IC401 with output (pin 5) and an open drain lock detect output (pin 14) compares divided VCO frequency with the comparison frequency. It generates a correction voltage that is applied to a low-pass filter consisting of R406, C25 and R403, R405,R19,C405,C406 then sent to the VCO circuit.

#### \* VCO Circuit

The transmit/receive frequency is directly generated by the Colpitts oscillation circuit contains Q302, Q303. The oscillation frequency is variable by applying the VCO control voltage to variable capacitors D310, D311,D303,D312,D306,D307(TX)and D304,D305,D301,D302(RX). To switch between transmit and receive frequencies, Q305,Q306 turn on, and Q302 (VCO for transmission) oscillates when the T/R pin is High.

## 2) TRANSMITTER

#### \* MIC AMP Circuit

Voice signal from the microphone are applied to microphone amplifier IC602 through SP\_JK JACK1 .

IC602 contains a low-pass filter that has a 6dB/oct response between 300Hz and 3 kHz and eliminates harmonics above 3 kHz. The pre-emphasized audio signal is applied to RV301 from U606 pin 23 to adjust maximum frequency deviation.

#### \* VCO AND Amplifier

The VCO signal output is amplified by Q301 and then fed to power module Q201 from Q205,Q203, Q202

#### \* TX Power Amplifier Circuit

Q201is provided approximately 7.5V DC power source.

RF power output is adjusted by D/A converter IC803 .

Signals from Q201 is supplied through antenna switch D101,D3 to a low-pass filter made up of L101,L102,L103 and C101,C102,C103,C105,C106 then applied to Antenna Connecter.

## 3) RECEIVER

#### \* ANT Switching Circuit

Signals from antenna connector fed to the antenna switching circuit through the low pass filter consisting of L101,L102,L103, L105 and. C101,C102,C103,C105,C106 In receive mode, D101,D3 is turned off, isolates the antenna from the transmitter circuit and matching circuitry, so that the incoming signals are fed to the Front-end through L105.

#### \* Front-end Amplifier Circuit

The signals from the switching circuit are fed to the RF amplifier Q101 through a band pass filter made up of molded coil ,vvc diode and capacitor.

#### \* First Mixer Circuit

The amplified signals are fed to Gate 1 of the first mixer Q105 through C51.

First local oscillator signal is supplied to Gate 2 of Q105 from the VCO through C132 to convert the RF signals into 43.655MHz first IF signal.

#### \* IF Circuit

The first IF signals from Q105 are fed to the matched pair crystal filter F101, then IF signals are amplified in Q103. And those signals are fed to U1 which is composed of the second local oscillator, second mixer, limiter amplifier, quadrature detector and active filter circuit. The second local oscillator at 43.2MHz with X401and is fed to the second mixer with the first IF signals to convert into 455kHz second IF signals..

The second IF signals leave through pin 3, and are fed to external ceramic filters F101 which has excellent selectivity, then fed to U1 (pin 5) again to be amplified and detected. The detected AF signals are output from pin 9.

#### **\* Audio and Squelch Circuit**

The detected audio signals are put through a 6dB/oct de-emphasis circuit made up of C162 and R153. The signal is then applied to audio power amplifier IC603 through audio signal processor IC606(Out pin16 through pin14) and the volume control SW701 to obtain enough power to drive the speaker.

Part of the recovered noise signal is fed to the integrated operational amplifier inside U1, which, with AMP (Q110), R147,C165,C166 makes up a low pass filter . The Audio signal processor reaches the integrated DC amplifier in Q110 which has hysteresis to prevent jitter. The sensitivity of squelch is adjusted by A/D of IC801.

## **4. ALIGNMENT PROCEDURE**

### ***Measurement Condition***

The following sections describe the alignment procedure for HL-1511 Series LMR transceiver under the following reference environment conditions:

Temperature	:	25°C
Relative Humidity	:	65%
Power Supply Voltage	:	7.5VDC +/- 5%

### ***Test Equipment / Tools required***

The following list of equipment is recommended for use in setting up the radio properly. Please ensure the test equipment is calibrated according to the manufacturer's instructions:

- Frequency counter more than 400MHz +/-100Hz tolerance, high input impedance and high sensitivity
- FM Signal generator, 1GHz with adjustable frequency, FM deviation, and RF output attenuators. 50Ω Output impedance.
- Oscilloscope, high input impedance.
- 16Ω 1 Watt resistor as loudspeaker load
- Audio Signal Generator, 10Hz to 20KHz, 600Ω impedance with attenuators.
- RF Watt meter, with 50Ω 10 Watt termination resistor (Or RF Voltmeter with 50Ω termination and external 50Ω attenuators)
- Regulated Power Supply 7.5VDC 3A output
- Digital A-V-O Multi-meter
- SINAD Meter
- External Speaker Mic. plug (or special audio test jig)
- Interconnection test cable for RF and Control PCB
- Circuit Diagram for HL-1511Series
- PCB layout diagram for HL-1511 Series
- Tuning tools for RF/IF transformer and the VR potentiometers

## ***Disassembling the unit***

The antenna

Disconnect the antenna

The Cover

- Remove the battery.
- Remove the 2 screws.
- The case could then be opened for servicing.
- Be careful NOT to disconnect the pin connector between RF board and Control board.

The PCBs

- The radio consists of two PCBs, the RF (rear side) and control board (front side)..
- On the RF Board, connect ANT1 to a signal generator or RF power meter.
- On the RF Board, connect Power Supply to the battery terminal contacts.
- Connect External Speaker Mic Plug (or Audio Test Jig) to Jack1.

## ***Transmitter Circuit Adjustment***

Model : HL-1511

- Crystal frequency

On receiving mode, check Crystal output is at 14.4MHz

- Transmitter Frequency

Connect RF Power meter to ANT1, Activate PTT to transmit on 155.0250MHz(HL-1511). And Set RV401 for transmitting frequency error is within +/- 200Hz.

- Transmitter Output Power( Tune mode)

•Tune Mode ; Power SW on during (up + down + Fun key) keys push to test mode then push (■) to tuning mode.

Push “■” to select [001P-xx] then PTT on, Push “up/down” after tuned and press to Enter key(Monitor Key). Where, 001 ‘P’ means rf Power

Activate PTT to transmit on 155.0250MHz, Set Tune mode for rating power output at ANT1. And Set rf power output at ANT1 after changing Low power output mode.

- Transmitter Sub-Audible Tone Deviation

Set radio to transmit on Carrier frequency, with CDCSS code 023 and no audio modulation. Adjust RV601 for 0.45KHz deviation.

- Transmitter Deviation Limit

Set radio to transmit on Carrier frequency. At the external microphone input, inject 1KHz tone at -20dBm. Adjust RV301 for 2.0/4.0KHz deviation.

## ***Receiver Circuit Adjustment***

- FM Demodulator Adjustment

Set radio to receive on Carrier frequency, No CTCSS or DCS and any tone. Connect RF Signal Generator to ANT1, Set generator to frequency at -47dBm (50Ω) output with 1KHz tone modulation at 1.5KHz deviation.

- Receiver Squelch Adjustment

•Tune Mode ; Power SW on during (up + down + Fun key) keys push to test mode then push (■) to tuning mode.

Push “■” to select [001S-xx] then PTT on, Push “up/down” after tuned and press to Enter key(Monitor Key). Where, 001 ‘S’ means Squelch

After checking the receiver sensitivity, further lower the RF Signal Generator output to 8-10dB SINAD and observe the squelch circuit operates.

At tune mode

- The “001 F – A0” means 1ch, Front-end(RX sense), A0 hex Value(Up/Down)
- The “001 S – 00” means 1ch, Squelch(Close), 00 hex Value(Up/Down)
- The “001 S – 00 , H ” means 1ch, Opening Squelch, 00 hex Value(Up/Down)
- The “001 P – 60 ” means 1ch, RF Low Power, 60 hex Value(Up/Down)
- The “001 P – 88 , H” means 1ch, RF High Power, 88 hex Value(Up/Down)
- Channel change Method
  - ; ■ key + Up key or ■ key + Down key

## 5. TECHNICAL SPECIFICATIONS

Model Number: HL -1521Series, Headline Systems Ltd.

### A. GENERAL

1) Frequency Range	: 136~174 MHz
2) Modulation Type	: 8.5KOF3E (FM)
3) Channel capacity	: 99 channels
4) Channel spacing	: 12.5 KHz
5) Power Supply	: DC 7.5V, Ni-Mh or Li-ion(Option) Rechargeable Pack
6) Current Drain	: High Transmitter (4W) -- < 1.8A (Ni-Mh or Li-ion(Option) Rechargeable Pack) Low Transmitter (1W) --- < 0.8A (Ni-Mh or Li-ion(Option) Rechargeable Pack) Receiver (1.0W) ----- < 200mA
7) Battery Life	: 10/14 hrs (Ni-Mh,1350 mA, Rechargeable Pack) (at 5%-5%-90% transmit-receive-standby cycles)
8) Operating Temperature	: -30°C to + 60°C
9) Dimension	: 105(H) x 50(W) x 35(D) mm, Ni-Mh / 105(H) x 50(W) x 30(D) mm, Li-ion
10) Weight (W/Batteries)	: 290g (1350mAH, Ni-Mh battery) / 232g (1700mAH, Li-ion battery).

### B. TRANSMITTER

1) Power Output	: High (5W), Low (1W)
2) Frequency Stability	: Better than +/- 5ppm within operating temperature
3) Hum & Harmonic	: -40dB (with 300Hz to 3KHz audio filter)
4) Spurious & Harmonics	: -65dBc

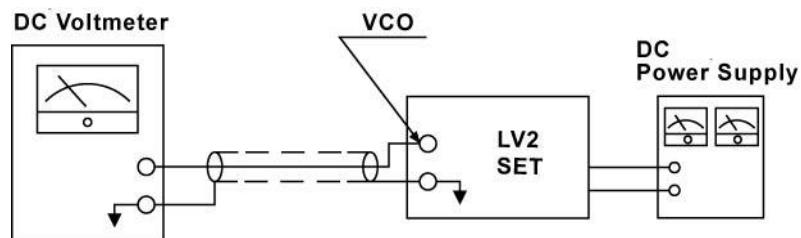

- 5) Audio Distortion : Less than 5% (1KHz tone 6 0% modulation)  
 6) Audio Response @6dB/oct : +1 /- 3dB (pre-emphasized)

### C. RECEIVER

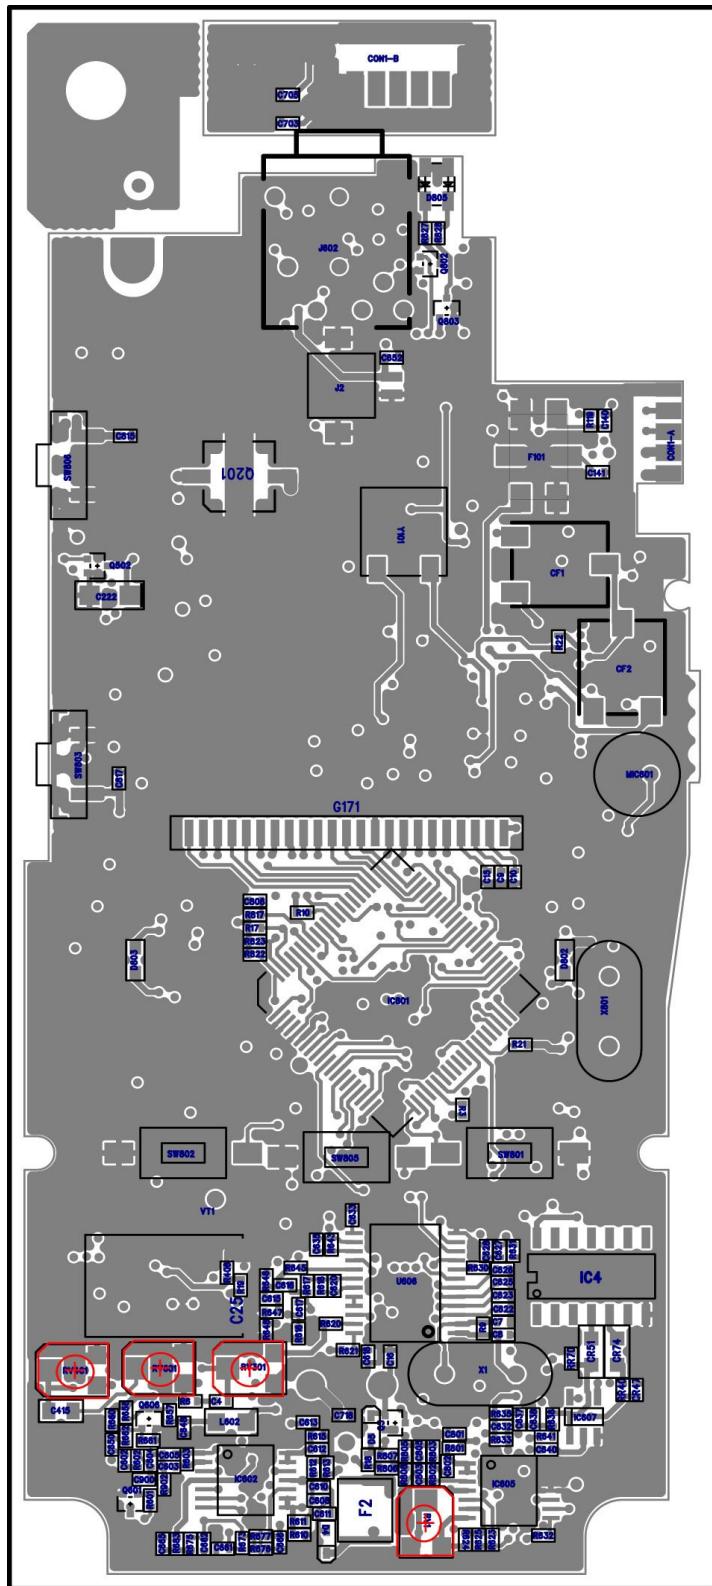

- 1) Sensitivity (12dB SINAD) : 0.25uV (-119dBm SINAD)  
 2) Selectivity : -65dB  
 3) Inter-modulation : -65dB  
 4) Spurious and image rejection : -70dB  
 5) Maximum Audio Output : More than 1W (15% distortion)  
 6) Audio Distortion : less than 5%

### D. VCO ALIGNED

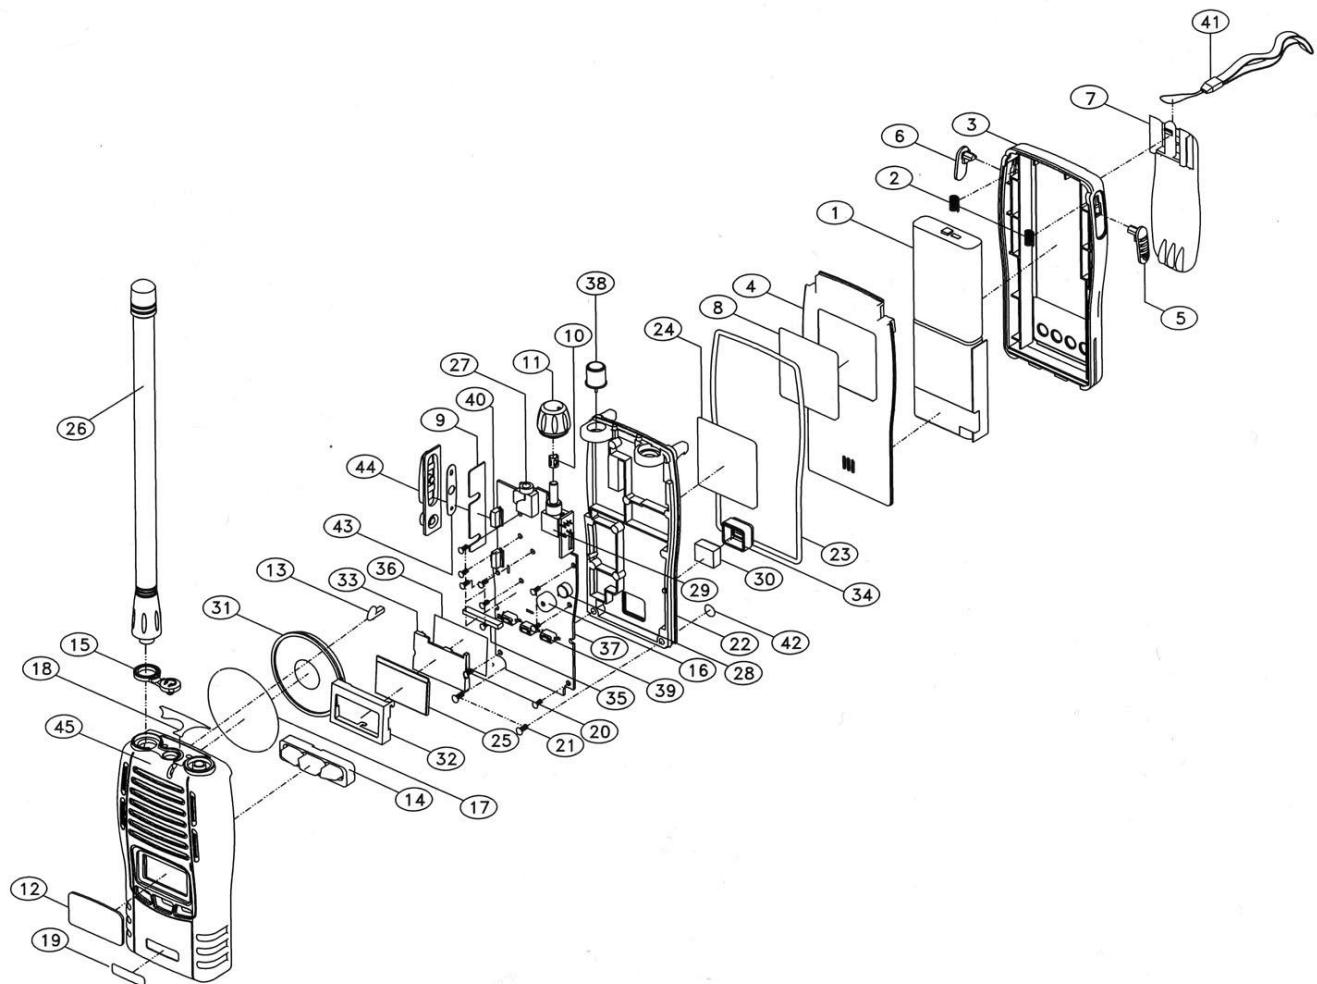

Step	Setting	Connection	Adjuster	Adjust for
1	Power on	With the use of dc voltmeter connect the positive terminal of voltmeter to VT test point of the pcb and negative terminal of the voltmeter to the ground. Measure the reading of VCO Voltage.	Rx[L304] Tx[L307]	DC3.8~4.0V[169.9750Mhz] DC4.4~4.6V[169.9750Mhz]
